

## PIXERA CONTROL

PIXERA control is a powerful **show control platform** that allows you to **interact more directly with the incredibly powerful PIXERA API**.

This **distributed integration and control framework** empowers users to seamlessly **host new functionalities** within PIXERA and to **control all aspects of an extended project environment**. Anything you create and integrate can be distributed across your connected systems and **shares itself**.

[www.PIXERA.one/PIXERAcontrol](http://www.PIXERA.one/PIXERAcontrol)

- ✓ Versatile **UI (user interface) builder** with modern control element styles
- ✓ **Node system** for drag and drop control logic creation
- ✓ **LUA scripting core** based on an extensible, distributed API
- ✓ **Industrial-strength protocol support** (ISAAC Workspace, Beckhoff, KNX, Stage Precision etc.)
- ✓ **Infinitely extensible** as more and more third party modules become available
- ✓ **Free demo version** and three **different license options** available
